In the Claims:

1-5. (Cancelled).

6. (Currently Amended) A film roll of [[the]] a polyolefin laminate film ~~of claim 1 or 2~~ wound into a roll, the polyolefin laminate film comprising an oriented base layer mainly comprising a polypropylene resin and a sealing layer mainly comprising a polyolefin resin which is formed on at least one surface of the base layer, which film has a product takeout width of not less than 500 mm and satisfies the following relational formula of a width direction thickness variation rate Y (%) of the aforementioned film and a product takeout width X (mm) of the film:

$$Y \leq 0.001X+4,$$

wherein the polyolefin laminate film of the roll has a product takeout width of not less than 500 mm and a length of not less than 2000 m.

7. (Previously Presented) The film roll of claim 6, wherein the polyolefin film of the roll shows a thickness variation Z (%) of not less than 3% and not more than 15%, when a test piece (20000 mm in the machine direction and 40 mm in the width direction) is cut out from the film in the stable region in the length direction of the film where the film property is stable and the thickness is continuously measured for 20000 mm in the machine direction.

8. (Currently Amended) A roll of [[the]] a polyolefin laminate film ~~of claim 1~~ wound into a roll, the polyolefin laminate film comprising an oriented base layer mainly comprising a polypropylene resin and a sealing layer mainly comprising a polyolefin resin which is formed on at least one surface of the base layer, which film has a product takeout width of not less than 500 mm and satisfies the following relational formula of a width direction thickness variation rate Y (%) of the aforementioned film and a product takeout width X (mm) of the film:

$$Y \leq 0.001X+4,$$

wherein the film has a width of not less than 5500 mm and a length of not less than 2000 m.

9. (Previously Presented) The polyolefin laminate film roll of claim 8, wherein the polyolefin film of the roll shows a thickness variation Z (%) of not less than 3% and not more than 15%, when a test piece (20000 mm in the machine direction and 40 mm in the width direction) is cut out from the film in the stable region in the length direction of the film where the film property is stable and the thickness is continuously measured for 20000 mm in the machine direction.

10. (Currently Amended) A film roll of [[the]] a polyolefin laminate film ~~of claim 3~~ wound into a roll, the polyolefin laminate film comprising an oriented base layer mainly comprising a polypropylene resin and a sealing layer mainly comprising a polyolefin resin which is formed on at least one surface of the base layer, which film has a product takeout width of not less than 500 mm and satisfies the following relational formula of a width direction thickness variation rate Y (%) of the aforementioned film and a product takeout width X (mm) of the film:

$$Y \leq 0.001X+4,$$

wherein the base layer comprises an antifog agent, and the polyolefin laminate film of the roll has a product takeout width of not less than 500 mm and a length of not less than 2000 m.

11. (New) The film roll of claim 6, wherein the polyolefin laminate film is biaxially oriented.

12. (New) The film roll of claim 10, wherein the polyolefin laminate film is biaxially oriented.
